

Amanda is a Senior Microbiology Specialist with ValSource. Amanda started her career in medical microbiology after receiving her B.S. in Microbiology from Purdue University. She worked as a quality control microbiologist with blood products and neutraceuticals before landing in cell and gene therapy. Amanda's healthcare background and experience with both environmental monitoring and release testing in the emerging field of cell and gene therapy gives her a unique approach to pharmaceutical microbiology. Amanda's focus throughout her career has been improving process quality and product safety with the end goal of improving patient outcomes.
